Gants de protection

Norme EN 374
Changer régulièrement les gants.
Contrôler la perméabilité avant chaque nouvelle utilisation du gant.
Choix du matériau des gants en fonction des temps de pénétration, du taux de perméabilité et de la dégradation. Il convient de tenir compte du fait que la

résistance d'un gant est influencée par des facteurs tels que la température d'utilisation du produit, sa concentration, l'épaisseur du gant, le temps d'immersion. Préserver du risque chimique demande de connaître également l'ensemble des autres paramètres propres au poste de travail (risque mécanique, thermique, dextérité requise, manipulation de pièces abrasives).

Se référer aux informations sur les résistances chimiques du fabricant de chaque gant et mener un essai préalable pour déterminer si le gant est adapté aux conditions d'utilisations réelles.

· Matériau des gants

Gants laminés multicouches.

Gants en néoprène

Le choix de gants appropriés ne dépend pas seulement du matériau, mais également d'autres critères de qualité qui peuvent varier d'un fabricant à l'autre.

Épaisseur du matériau recommandée: $\geq 0,5$

· Temps de pénétration du matériau des gants

Le temps de pénétration exact est à déterminer par le fabricant des gants de protection et à respecter. Il faut noter que la durabilité des gants de protection chimique peut être notablement plus courte que le temps de pénétration mesuré par la norme EN374 en raison des nombreux effets extérieurs spécifiques à un poste de travail.

Valeur pour la perméabilité: taux ≥ 240 min

Section 2	Operational conditions and risk management measures
Section 2.1	Control of environmental exposure
Product characteristics	substance is a unique structure, ketone, readily biodegradable
Amounts used	Annual site tonnage (tonnes/year): please use the Excel-Tool 'ECT Acetone' to calculate your maximum tonnage/year
Frequency and duration of use	Emission Days (days/year): 3600dy
Other Operational Conditions of use affecting environmental exposure	Indoor/Outdoor use
Technical onsite conditions and measures to reduce or limit discharges, air emissions and releases to soil	Common practices vary across sites thus conservative process release estimates used. Typical technical measures are closed systems or scrubbers or charcoal adsorbers. Typical onsite offgas treatment technology provides removal efficiency of 90 %
Organisation measures to prevent/limit release from site	Common practices vary across sites thus conservative process release estimates used. Please use the Excel-Tool 'ECT Acetone' to check your local conditions.
Conditions and measures related to municipal sewage treatment plant	Please use the Excel-Tool 'ECT Acetone' to check your local conditions.
Conditions and measures related to external treatment of waste for disposal	External treatment and disposal of waste should comply with applicable regulations
Conditions and measures related to external recovery of waste	External treatment and disposal of waste should comply with applicable regulations
Other environmental control measures additional to above	none
